224 825 or hear the noise and run away. For this reason the hunters are very careful about these two things—namely, the number of bears shot and the direction of the wind. The method of hunting bears when the acorns fall and they come to the open or cleared spaces is known as the *hirusi'e* method. When the bears eat acorns then only is it easy to find them and kill them without much effort.

224 [721 648] *Description of a buffalo hunt.* Whenever the Winnebago went buffalo hunting, they always went in large numbers, for the people used to say that on a buffalo hunt, they are likely to encounter their enemies and a fight might take place. It is even said that some people went purposely for the fighting. They generally went together with the *Homoⁿa* (Missouri ?), Waxoⁿcera, Iowa, and *Wadjabdjadjera*, the Oto. Many women accompanied them. It is said that they could always tell where the buffalo were by the dust they encountered, for the dust raised by the trampling of the buffalo rose high in the air. They would always start out for the buffalo early in the morning on fast horses and try to ride up along the right side of the female buffalo, for they only killed the bulls afterward. They shot the buffalo with bow and arrows. When riding horseback, the bow is always drawn back with the right hand. The reason they try to kill the female buffalo first is because they always run away while the bulls do not.

While hunting the buffalo they were always bound to meet some of their enemies and a fight would ensue, so that when they returned, they would bring back not only buffalo but also scalps, and immediately after their return the Victory Dance would be celebrated. [727]

224 721 A different account of a buffalo hunt was obtained from another informant (*J. H.*):[1]

[343] Whenever we go on a buffalo hunt we camp in a circle, with the soldiers in front. They always carried long poles to be used in the construction of tipis. [This statement was made by a number of persons whose information was generally accurate. As they were bound for the open prairie where there was a scarcity of wood, buffalo manure was always carried for fuel.] [237 372]

As soon as the chief decided to go on a hunt he gave a feast [war feast] to which he invited everyone. This was generally in June. As soon as the feast was over a hunting council was held. Then the chief appointed public criers who went around the village announcing the time for starting, etc. Then all went to the lodge of the chief of the Bear clan. There the ten best warriors were selected, who were to go ahead of the main body and reconnoiter for both buffalo and enemies. These started immediately and if they returned with the news that they had found many buffalo and enemy at the same time, fights frequently took place. Ten warriors always went ahead and the old warriors generally stayed in the rear behind the women in order to protect them better. As soon as they came to the place where the buffalo were seen they followed their trail and killed them. The flesh was cut up into large chunks, which were afterwards dried on the grass. Then when they had enough they all returned home, observing, of course, the same order of march as when they started. When they reached their home they gave another war feast at which all thanked the spirits for their successful return. [203]

223 [762] *Pigeon hunt.*—The pigeons are "chief"[2] birds and they would be hunted whenever the chief decided to give the chief feast. The entire tribe was always invited to participate in the meal served, so that many pigeons were needed. The pigeons generally make their nests near human habitations. Sometimes there would be 20

[1] As his grandfather was a Dakota, *J. H.* may have confused in his account Dakota customs with those of the Winnebago. Apart from this consideration, it should be said that *J. H.* was an exceedingly unreliable informant.

[2] They are called "chief" birds because the pigeon belongs to the same division as does the Thunderbird, or Chief, clan. [825 244]

1:Radin E-5 (1908-1913) 1923

in one tree, but a really large tree would hold even more. The pigeons were hunted in the following manner: Long poles were taken and the pigeons poked out of their nests. In this manner many would be killed very easily in one day. They are then either broiled or steeped, when they have a delicious taste. Often it is unnecessary to hunt for them after a storm because large quantities die from exposure to inclement weather. 223 [252]

Method of slaughtering animals.—According to most of the author's informants, all larger animals were opened by making two long incisions, one on each side of the chest. This information may be accepted as correct with respect to the bear, but there is less certainty as to other large animals. There are two considerations, however, which seem to make the question of agreement among informants of secondary importance: First, the considerable differences in this and kindred matters among the settlements of the Winnebago, due to the large extent of territory they inhabited and the diverse influences potent at various places; and secondly, the fact that the distribution of food was entirely a matter of courtesy between individuals, so that considerable variation in custom was both possible and probable. 252 224

According to one informant the man who killed an animal had the least to say about its distribution and generally got the poorest share. This unquestionably does not give a very accurate impression of the custom, because subsequent questioning brought out clearly the fact that the manner of distribution depended entirely on the number of individuals present at the killing of the animal, and also on the age of these individuals and their social standing. Remembering that there is no "typical" division which an Indian thinks of in the abstract, but that he always has in mind particular instances of distribution, in order to ascertain definite rules it would obviously be necessary to obtain an adequate number of representative cases in which all the possibilities based on the factors of age, number, and social standing would be duly considered. 224 425

From another individual the following information was obtained: When two people went hunting the man who killed the animal received the head, breast, feet, lungs, and heart; his companion, the hide and the rest of the animal. A feast was given afterwards, however, at which the bravest warrior received all that was properly the share of the man who killed the animal. When four went out, the eldest always got the hide; he was granted also the right to apportion the animal. This last instance seems significant in view of the fact that at the tribal hunt the rights of the individual who killed the animal were subservient to many other rights, as those pertaining to seniority and social standing, and suggests that only when one or two individuals took the rather great risks of hunting by themselves was actual killing of the animal deemed of predominating importance in the apportionment.

§11. *Wandering and Hunting*

After a while I used to get into the habit of going to town. When I got there I would look into the barrels to see if there was any food in them and if there was I would fill my pockets with whatsoever I found. I used to steal a great deal.

About springtime we always moved away from the vicinity of the town. We always moved to the place where my father intended to trap, generally to the neighborhood of some farming community where there were few Indians. There my mother used to make baskets and sell them to the farmers. We also used to circulate a written petition asking for any help people cared to give us. Whenever they went on this kind of a trip I always went along with them, for sometimes people would take pity on us and give us some old clothes. Sometimes we would even get a good meal at some farmer's house. For these reasons I was always envious of those who went along on such journeys.

Occasionally when we got many provisions I had to carry some of them, but I never minded that. When the birds returned north father used to make us bows and arrows and we would then shoot at them and often kill many. We also used to kill squirrels which my grandmother roasted for us. My older brother was a

*159 221 ● [223] good shot and I was greatly his inferior. He often killed pheasants.

*159 648 526 Whenever the older people went to town circulating petitions for help we youngsters always went along. We always took our bows and arrows with us for the Whites wanted to see how well we could shoot. Often they placed five-cent pieces on some object at a considerable distance and had us shoot at them. We generally hit a number. I would also let my brother shoot at twenty-five cent pieces that I held between my fingers and he never hit my fingers. We would often make as much as five dollars in this way and this money we always gave to our parents.

*159 22 [131] [861] In summer the Winnebago would return to Black River Falls (Wisconsin). We used to go out with our bows and arrows and stay out all day. At evening when we returned we of course always expected to get a scolding and we therefore had a good excuse ready. It really would have been much better had we returned earlier in the day, but we were enjoying ourselves so much hunting that night overtook us when we were still a long distance from home. Often we would not eat anything at all all day, but to that we were accustomed. Sometimes we would go fishing on a stream nearby, forget all about the time, and then return home very late. We got a scolding then even although we had a good excuse.
